

# FoxID32Lite

## FoxID 32-BIT SYSTEMS

### USES

- Staff ID Cards
- Membership Cards
- Loyalty Cards
- Visitor Passes
- Contractor IDs
- Access Cards

*FoxID32 Lite is a Photo ID software program that allows you to produce **full colour ID Cards** on any Windows™ compatible printer. The cards can contain photos, text, logos, barcodes and even magnetic stripe encoding.*

*With a single database and up to **18 user definable fields**, your database can be fully tailored to suit your needs. **Validation rules** and default values can be set for any of your alphanumeric fields. The data view where all information is shown, can be sorted for ease of viewing and features a scrolling display.*

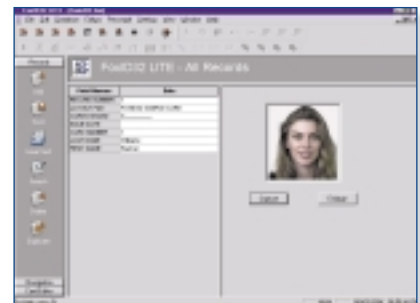

*Your data can be added using the **drop down lists** or it can be edited using simple point and click operations. The standard WYSIWYG print previews allow you to quickly and accurately ensure that all details are correct before issuing a card.*

*Specific records can be found easily using the **search engine** within FoxID32 Lite. Multiple fields can be searched simultaneously to provide you with all records matching your criteria. Alternatively, the **quick-search** function can be used to search on any one field to allow you to quickly find the data you are looking for.*

*Single or double-sided card templates can be designed in seconds using the integrated **Card Editor** within FoxID32 Lite. Landscape or portrait formats can be used on standard or custom sized pagers. 360° text rotation, snap to grid object placement, Object Linking and Embedding (OLE) and both standard and custom color palettes can be utilised to create your own vibrant and individual card designs. The FoxID32 Lite card editor features **fully dockable toolbars** for ease of use.*

*Default card layouts can be selected so that each new record automatically has your preferred card layout allocated.*

***Image capture** is available through Video for Windows™ and TWAIN®, plus digital images can be loaded directly from file. Images can be flipped or rotated as required. They can also be cropped so that the focus is the person and not on any unwanted areas. Brightness, contrast and colour can be adjusted on your photo to produce the best possible quality when printing.*

Taking advantage of the latest card printing technology, cards can be produced with watermarks, **ghosted images** and even holograms, on a wide range of surfaces. Cards can be batch printed for your convenience.

Most popular **barcode** formats are supported in FoxID32 Lite. Barcodes can be displayed with your selection of width, ratio and color. Data may be chosen from any field to encode to a **magnetic stripe**.

**FoxID32 Lite** is designed to be fast and easy to use. A true 32-bit application which can adapt to your ID card needs.

## FoxID32 Lite • SYSTEM SPECIFICATIONS

### Hardware/Software

- Pentium 200 or greater
- 32Mb RAM (64Mb recommended)
