

SkimSAFE™

FIPS 201 Approved Smart Card Shield

SkimSAFE™ badge holders protect your electromagnetically encoded information from theft or compromise. These new RFID-shielded products are FIPS 201 approved and are available in three styles.

How do they work? Your ID Card conveniently slides into the SkimSAFE cardholder, which blocks unwanted data transmissions to and from the card. When you need to open a door or verify the ID, just slide the card partially out of the holder and the card's encoded information will be readable. Simply re-lock the card in the holder when you're done.

SkimSAFE is available in three patent-pending designs and a variety of colors. All three models are FIPS 201 approved and GSA listed for use as an electromagnetically opaque sleeve.

SkimSAFE protects the following cards:

US Government Issued Cards:

TWIC (Transportation Worker Identification Credential)

PIV (Personal Identity Verification)

CAC (Common Access Card)
